EDUCATION

University of Tübingen

April 2024 - Expected 2026

Master of Computational Linguistics

Current GPA: 1.3 (German Scale, 1.0 highest)

University of Jinan

Sep 2018 - Jul 2022

Bachelor of Computer Science and Technology

Major GPA: 4.3/5.0

RESEARCH EXPERIENCE

SemEval-2026 Task 9: Detecting Multilingual, Multicultural, and Multievent Online Polarization (Ongoing)

Oct 2025 - Feb 2026 (Expected)

University of Tübingen | Advisor: Dr. Cagri Coltekin

- Subtask 1 – Polarization Detection: Developing systems to distinguish polarized from non-polarized discourse in multilingual social media data.
- Subtask 2 – Polarization Type Classification: Identifying the targets of polarization, such as political, ethnic, gender, or religious divisions.
- Subtask 3 – Manifestation Identification: Detecting linguistic markers of polarization, including stereotypes, vilification, dehumanization, and absolutist framing.

Fake News Detection on the LIAR Dataset

Aug 2025 - Sep 2025

University of Tübingen | Advisor: Dr. Maxim Korniyenko

- Compared a traditional ML baseline (TF-IDF + Logistic Regression) with a fine-tuned BERT model for detecting deceptive text.
- Applied semi-supervised learning techniques, including pseudo-labelling and Easy Data Augmentation (EDA), to improve low-resource performance.
- Strengthened understanding of NLP pipelines, experimental design, and result interpretation.

OTHER EXPERIENCE

Thesis Review System (Undergraduate Thesis Project)

April 2022 - Jun 2022

University of Jinan | Advisor: Prof. Tingwei Wang

- Designed and implemented a WeChat Mini Program for managing thesis review workflows involving students, teachers, and administrators.
- Developed a role-based access control system:
Students can upload theses and view grades. Teachers can review assigned theses and upload evaluations. Administrators can assign students to teachers and oversee grading progress.
- Gained experience in structured data management and user-centered system design, reinforcing computational problem-solving skills.

SKILLS

Languages: English (IELTS 7.0), Chinese (Native)

Programming Languages: Python, C++, C, Java

Machine Learning and NLP Frameworks: PyTorch, Hugging Face Transformers, TensorFlow, Scikit-learn

Web and Data Tools: SQL, HTML, CSS, JavaScript, JavaEE

Other Tools: L^AT_EX
