

Education

- 04/2024 – Present
University of Tübingen
M.A. Computational Linguistics
Current GPA: 1.63 (German scale; 1.0 = highest)
- 09/2018 – 07/2022
University of Jinan
B.Sc. Computer Science and Technology
Major GPA: 4.3/5.0

Publications

- 2026
Fengze Guo, Yue Chang.
“YEZE at SemEval-2026 Task 9: Detecting Multilingual, Multicultural and Multievent Online Polarization via Heterogeneous Ensembling.”
Proceedings of the 20th International Workshop on Semantic Evaluation (SemEval-2026), Association for Computational Linguistics, pp. 1860–1873.

Research Experience

- Present
Master’s Thesis: Layer-wise Lexical Accessibility in Language Models: A Plain Logit Lens Study across English and Chinese
University of Tübingen | Advisor: Dr. Çağrı Çöltekin
- Investigate layer-wise lexical accessibility under the plain Logit Lens, distinguishing predefined gold-target accessibility from convergence toward the model’s eventual Top-1 prediction.
 - Built a controlled English–Chinese sentence-completion dataset across four semantic groups, with tokenizer-aware single-token target alignment across languages and Qwen3 model sizes.
 - Analyze variation across model scale, language, and semantic relation, including paired comparisons with translation-equivalent and broader-category lexical alternatives.
- 04/2026
Multilingual Online Polarization Detection – SemEval-2026 Task 9
University of Tübingen | Advisor: Dr. Çağrı Çöltekin
- Developed multilingual classification systems for polarization detection across 22 languages using XLM-RoBERTa and multilingual DeBERTa.
 - Investigated class imbalance, threshold calibration, weighted binary cross-entropy, focal loss, and heterogeneous ensembling under severe label sparsity.
 - Achieved Top-10 rankings in 11/22 languages for binary detection, 16/22 for polarization type classification, and 15/18 for manifestation classification.
- 03/2026
Semantic Parsing for Text-to-SQL Tasks
University of Tübingen | Instructor: Dr. Johannes Dellert
- Designed controlled ablation experiments to evaluate LLM schema linking and execution accuracy under systematically masked database metadata.
 -
 - Analyzed failure modes under lexical schema anonymization while preserving relational structure, identifying cross-table join prediction as a key bottleneck.

02/2026 **Sociolinguistic Study on Sentence-Final Particle Variation in Mandarin**

University of Tübingen | Instructor: Dr. Karen V. Beaman

- Conducted semi-structured sociolinguistic interviews to investigate variation in Mandarin sentence-final particles across age groups and sentence types.
- Performed quantitative distributional analysis on 400 annotated utterances to examine systematic variation in pragmatic and discourse functions.

01/2026 **GenAI-Assisted Academic Writing in Chinese EFL Learners**

University of Tübingen | Instructor: Prof. Dr. Detmar Meurers

- Conducted a corpus-based study comparing Chinese EFL learner essays, ChatGPT- and Claude-revised versions, and native student writing to examine how generative AI alters academic register.
- Analyzed lexical density, nominalization, academic vocabulary, and lexical diversity, finding that AI revision systematically amplified academic features and often produced a hyper-academic style exceeding native-student norms.

09/2025 **Fake News Detection on the LIAR Dataset**

University of Tübingen | Instructor: Dr. Maxim Korniyenko

- Benchmarked a fine-tuned BERT classifier against a TF-IDF + Logistic Regression baseline across six-class fine-grained veracity labels.
- Applied pseudo-labelling and Easy Data Augmentation (EDA) to address low-resource constraints and improve macro-F1 over the baseline.

Skills

Programming: Python, C++, Java

Machine Learning & NLP: PyTorch, Hugging Face Transformers, scikit-learn

Data & Scientific Computing: NumPy, pandas, SciPy, Matplotlib

Tools: Git, LaTeX

Languages: English (IELTS 7.0), Chinese (Native), German (Beginner)
